

Your Data Is Everywhere Do You Know What's In It?

*Most organisations are accelerating AI investment before answering a fundamental question.
The MTI & Cyera Data & AI Assessment gives you the answer - in days, not months - and tells you exactly what to do about it.*

50%+

more sensitive data
uncovered

80%

reduction in manual
effort

90%

fewer DLP false
positives

96%

of permissions go
unused today

Three Problems Every Organisation Faces Right Now

01 - You Don't Know What You Have

Most organisations have no accurate picture of where their sensitive data lives. It's spread across cloud, SaaS and on-prem - and growing faster than any team can track. Legacy discovery needs endless rules and still misses the most critical data.

02 - AI Is Creating Risk You Can't See

Employees are already feeding sensitive files into Copilot, ChatGPT and AI agents before any policy can catch it. Agents are spinning up across environments with nobody watching - and they exploit every over-privileged permission they find.

03 - DLP Isn't Working

Legacy DLP - including Purview out of the box - is noisy, policy-heavy and buried in false positives. Teams spend more time managing alerts than acting on real risk. The result: fatigue, blind spots and data loss nobody catches in time.

The Assessment

What MTI & Cyera Deliver

Agentless. Non-invasive. **Connects in minutes, answers in days.**

Nothing to install, no rules to write - just a complete, contextual map of your data and a clear path forward.

The Three Pillars

01 - DATA DISCOVERY

See Everything. Write Nothing

Cyera's AI-native engine surfaces all sensitive data automatically - across cloud, SaaS and on-prem. No rules. No RegEx. No agents. Deep context on ownership, usage and risk - not just a list of files.

02 - AI VISIBILITY

Govern Everything AI Touches

See every AI tool and agent running around the business - sanctioned or not - and exactly what data each one reaches, moves and exposes. Complete visibility before your AI programme moves to production.

03 - DATA CONTROL

Make DLP Actually Work

See every AI tool and agent running around the business - sanctioned or not - and exactly what data each one reaches, moves and exposes. Complete visibility before your AI programme moves to production.

Key Takeaways

- ✓ Full map of sensitive data across your environment
- ✓ Risk-ranked findings with remediation priorities
- ✓ Data access and permissions review
- ✓ AI exposure report across every tool and agent
- ✓ DLP gap analysis against your current tooling
- ✓ Actionable roadmap for data security maturity

Get The Data Foundation Right. Accelerate Everything Else.

The organisations moving fastest with AI aren't the ones with the biggest models - they're the ones who sorted their data first. When you know what you have, where it lives and who can reach it, you deploy AI with confidence rather than confusion.

18-Month Faster Rollout

One Cyera customer used the assessment findings to accelerate their Microsoft Copilot rollout by 18 months. The blocker was never the technology - it was not knowing which data Copilot could surface.

Once they had that visibility, the programme moved.
